Note: Protected image screens are primarily used in harsh inspection environments. The glass screen is encapsulated, sealing the image from the elements. Our *Standard Image* has a proven history of *Durability*, providing a sharper and more distinct image. However, if the environment warrants this type of protection, then the use of a protected image is suggested. If the recommended cleaning instructions are followed, (provided by V.I.P.) the glass comparator screen/chart/s will endure.
